Project Description

This is the design document for my Project 1 personal home page for the CS5610 Web Development class. The website is intended to target the three main audience groups:

- Recruiters and employers
- Professor and classmates
- Professional contacts

This personal home page will let the visitors get to know my background, education, professional experience, technical skills, projects, career direction and personal interests which will provide a complete picture of who Thai Ken Yong is.

One unique feature of my website will be showing my professional journey from my home country Malaysia, to Singapore and then to the United States as an interactive timeline. The website will also include a Personal Interests page to show my interest in baking.

Assumptions and Constraints

In this section, I will state the boundaries of the project so that the scope is clear for everyone.

Assumptions

- This homepage website is static, front end only website builds without a backend, database or server-side logic
- Content is authored and maintained by Thai Ken Yong
- Visitors are using modern web browser such as Chrome, Edge, Firefox or Safari that come with the support of JavaScript.

Constraints

- This website must be built using vanilla HTML, CSS3 and ES6+ JavaScript modules with no component frameworks (React, Vue) and no jQuery.
- Two of the pages must be built by Thai Ken Yong without using AI to generate the code. One of the pages must be generated with the assistance of Gen AI tool

Out of Scope

- User account, authentication or any submission that persists data
- Internalization and multi-language support

User Personas

In this section, I will provide the persona and the user story for the three audience groups that I mentioned in the project description.

Persona 1 – Recruiter and Hiring Manager

Background

A recruiter or hiring manager who is looking for an experienced candidate for a Senior Business System Analyst, ERP Consultant or Software Engineer position.

Goal

They want to know about my background such as my work experience, professional skills and a little bit about my personal interest.

Need

They need to quickly understand my experience and determine whether my background matches the position they are trying to fill.

Persona 2 – Professor and Classmate

Background

A professor or classmate who would like to get to know more about me.

Goal

They want to know about my background such as my professional skills that I developed in my job, the university I graduated from and how my previous professional experience connects to what I am learning now.

Need

They need to understand my background and work experience to help break the ice especially at the beginning of the class.

Persona 3 – Professional Contact

Background

A former coworker, current coworker, manager, client, consultant or someone that I met through professional networking who would like to reconnect with me or learn more about what I am currently doing.

Goal

They want to know about my career journey, professional experience, current work and technical skills.

Need

They need an easy way to understand how my career has developed from working in Malaysia, to Singapore and then to the United States and how my experience has changed over the years.

User Stories

User Story 1- Recruiter and Hiring Manager

As a recruiter or hiring manager, I want to quickly view Ken's professional experience and technical skills so that I can determine whether his background matches the position I am trying to fill.

User Story 2- Professor and Classmate

As a professor or classmate, I want to learn about Ken's background, professional experience and education so that I can understand how his previous experience connects to what he is learning now and get to know him better.

User Story 3 – Professional Contact

As a professional contact, I want to see Ken's career journey and professional experience so that I can understand how his career has developed from Malaysia to Singapore and then to the United States.

Functional Requirements

Below are the functional requirements describing the main actions and information that the website should provide for its visitors.

ID	Requirement
FR-01	The website shall provide navigation between the Home, Experience & Skills and Personal Interest pages.
FR-02	The Home page shall introduce my professional background and provide access to my key professional information.
FR-03	Visitors shall be able to select Malaysia, Singapore or United States in the Professional Journey section to view information about that stage of my career.
FR-04	The Experience & Skills page shall present my work experience, technical skills, education and certifications.
FR-05	The Personal Interest page shall present my interest in baking through a gallery of my personal baking images.
FR-06	The website shall provide links that allow visitors to learn more about or connect with me through my professional and personal profiles.

Non-Functional Requirements

The non-functional requirements describe the quality and technical expectation for the websites.

ID	Requirement
NFR-01	The website should be responsive and remain usable across different screen sizes.
NFR-02	The pages should use semantic HTML and all meaningful images should provide descriptive alternative (alt) text to support accessibility.
NFR-03	The website should maintain consistent navigation, footer structure, typography and visual styling across the three pages.
NFR-04	The HTML pages should pass W3C validation with zero errors.
NFR-05	The JavaScript should follow the class ESLint configuration and the project should use Prettier for consistent formatting.
NFR-06	The website should be publicly accessible.

Site Map and Information Architecture

The website uses a simple three-page structure so visitors can quickly move between professional information and personal interests.

Home (index.html)	Experience & Skills (experience.html)	Personal Interest (interest.html)
• Introduction • Professional Journey • Featured Projects	• Professional Experience • Skills • Education • Certifications	• Baking Introduction • Baking Gallery • Instagram Link

All three pages are connected through the same main navigation so visitors can move directly from one section of the website to another.

Visual Design

This section documents the visual language that will be implemented in the CSS so that the future edits will stay consistent with the original design intent.

Color Palette

The palette uses a warm neutral background with muted green accents to keep the site professional, readable and consistent across pages.

	Page background	#F8F7F4	Body background — warm off-white
	Nav background	#E8ECE8	Navbar background — light sage
	Accent green	#4F6F5F	Journey buttons, footer links, accent borders
	Accent green (hover)	#3F5B4D	Hover state for journey buttons and footer links
	Text / headings	#000000	Body text and heading color

Typography

The typography creates a clear hierarchy by combining sans-serif fonts for the main content and major headings with serif fonts for smaller headings and navigation.

Element	Font Family	Purpose
Body text	system-ui, -apple-system, "Segoe UI", Roboto, Arial, sans-serif	Readable body text using familiar system fonts.
H1 and H2 headings	Arial, Helvetica, sans-serif	Strong, clear headings with a bold modern appearance.
H3, H4 and navigation	Georgia, "Times New Roman", serif	Visual contrast and hierarchy for smaller headings and navigation.

Technology Used

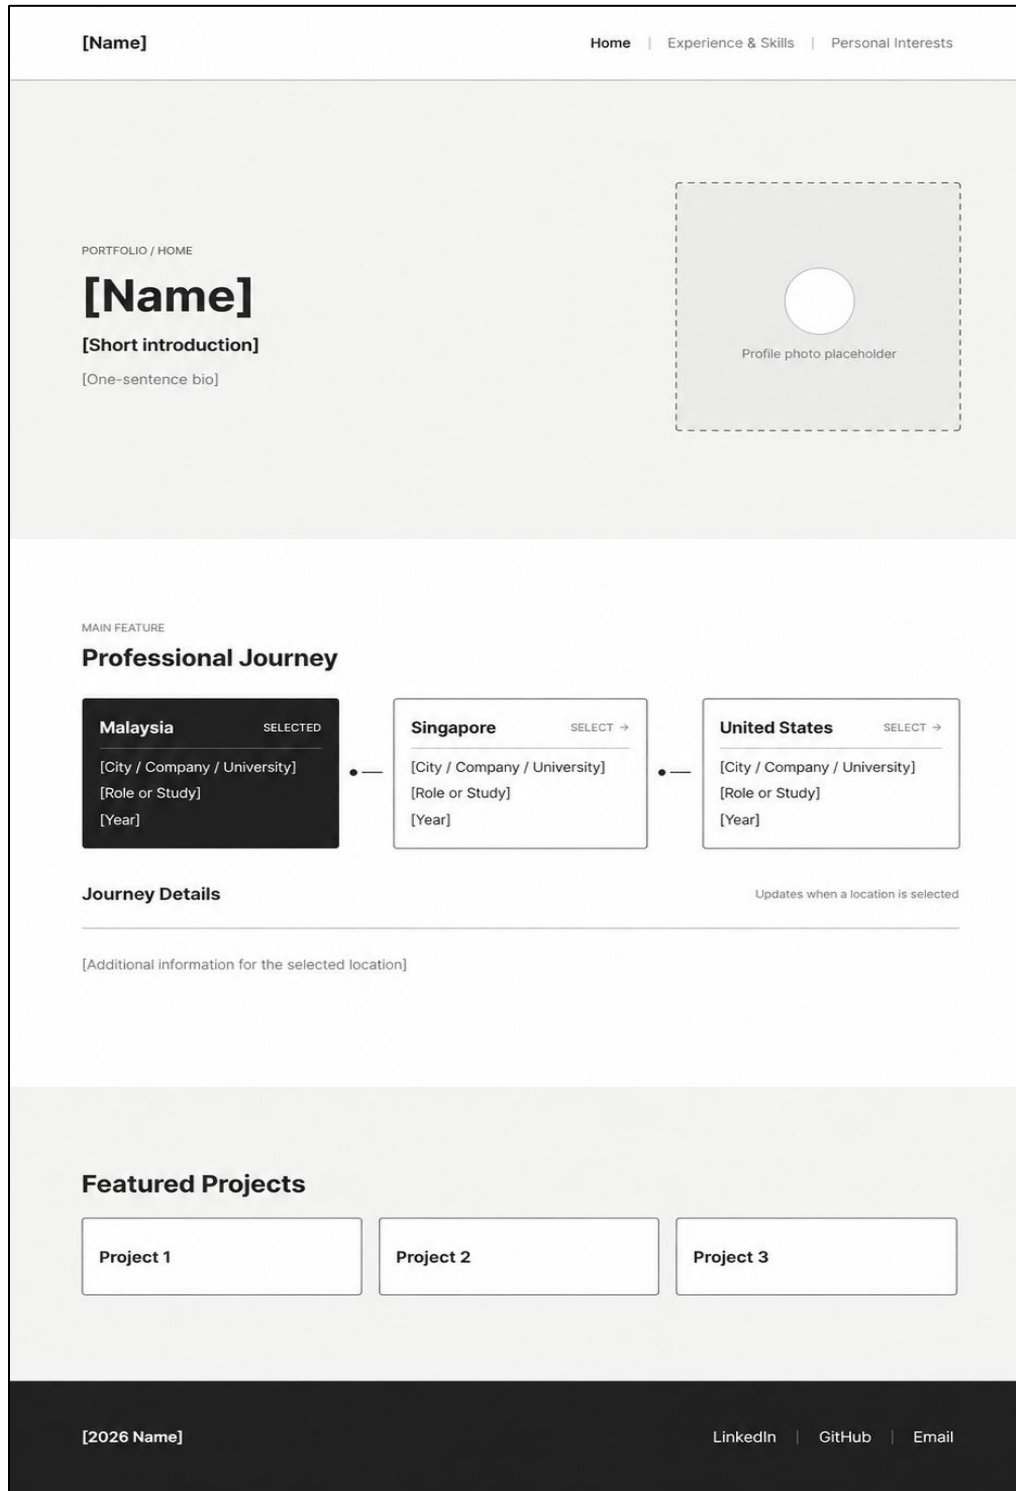

The following technologies support the design and implementation of the website.

Technology	Purpose
HTML5	Provides the semantic structure and content for the three web pages.
CSS3	Provides the custom visual styling for the website.
Bootstrap 5	Provides the responsive grid, layout and utility classes used by the pages.
JavaScript ES6+	Provides the original interactive Professional Journey functionality on the Home page.
ESLint	Checks JavaScript against the class linting configuration.
Prettier	Keeps project files consistently formatted.
Git & GitHub	Provides version control and stores the public project repository.
GitHub Pages	Publishes the static website for public access.

Design Mockups

These mockups were created through the Figma.com website.

PERSONAL INTEREST

Baking, one batch at a time.

A creative practice built around patience, precision, and sharing.

When I'm away from work, I'm usually testing a new recipe, refining a familiar loaf, or making something sweet for friends. This page collects a few recent bakes and the small stories behind them.
